PROJECTS

IT Governance of Faculty Building Movement using COBIT5 DSS 04.04 & 0.7

We have to assessed a BCP to make sure that meet requirements and business needs for future. Control Mapping was derived from COBIT 5 DSS04 04 and 07 then our duty is to make sure that is completely covered by making procedures, policies, guidelines and forms.

Implementing a Gojek & Grab Application as Digital Business App into a SME(Small Medium Enterprise) company in Surabaya

Implementing digital business application into 3 small medium enterprises in Surabaya which are :
1. Pangsit Tombo Luwe - Gojek and Grab Application
2. Pangsit Mie Ayam Top One Jakarta Sidoarjo - Gojek and Grab Application
3. Pangsit Mie Ayam Top One Jakarta Surabaya - Gojek and Grab Application

Automizing Business Process with Bonita Software (Superwash Laundry)

Make business process design then we continued to make it automized by "Bonita Software". It should be automatically replying email, sending SMS and other activities as correlated with Laundry Process

"TukuBatik" UI/UX Design and Prototyping with Justinmind

TukuBatik is an app innovated by our group to connecting people with seller of Batik and the needs of Batik. This projects takes an approximately 1 month to created its design and interaction between components. In the last we presented this project to our lecturer and other student that acted as investor and why they should invested their money to us. This development using Scrum Method to make sure all of client needs are meet.

Monitoring, Evaluating and Assessing Performance of Information Technology Department in PLN(Perusahaan Listrik Negara Surabaya Branch) using PowerBI

Derived a Business strategy into a measurement process especially its Information Technology Department. We've sorted list of KPI then we monitor those until a condition achieved. Lastly we represented it in PowerBI to those department.

Make Futsal-Matching Website with CodeIgniter Framework and Testing using PHP Unit

We use a CodeIgniter framework because of its MVC fundamental that make us easier to understand website backend related problems. We also using PHP Unit testing to make sure all of its function are working and no one is useless.

Building an International Network Configuration of XYZ Company with CISCO PACKET TRACER

In this project we created our own company (XYZ Company) to making a Network Configuration with CISCO PACKET TRACER. XYZ Company has one headquarter(Operational building and Network Operation Centre(NOC) building were built separately), eight branches and one DRC. Connection between NOC and DRC were using VPN. Every branches got connected with VOIP configuration and has its own website (web server), mail server, FTP, and DNS that managed used with IP Public

ETL Project of AdventureWorks2012 Using Microsoft SQL Server into Data Warehouse

This project is about Extracting, Transforming and Loading a database into a separate database as we called as Data Warehouse. Then it involved a lot of querying from so many table as we focusing on Sales Segment then we moved to create a procedure to make sure all of things are moved correctly.

Building a Website of Task, Department and Employee related with Angular6

There are so many frameworks for Front End development, but we use Angular6 since they are supported by a lot of moduls and pretty much the same with Javascript. This website can be accessed through http://i420882.hera.fhict.nl/

COVER LETTER

Hello

My name is Hafizh Ahmad Zuhdi and I am a student who focused both on Software Development and Information System services. I am studying Double Degree program between Institute of Technology of Sepuluh Nopember and Fontys Unversity of Applied Sciences. Besides of my academic skills, I also have capabilities on leading, speaking and team working because of my involvement in Campus and AIESEC as an international organization. Since my interest in Information Technology, it put me to become a student who always eager to work in a team and bridging IT people with business people. In this opportunity I want to expand my experience and knowledge with your company through Part-Time or Side-Time jobs. I have interest in Software Backend Development either it website, android or desktop application. As an alternative, Data Analysis and Machine learning are also can be considerable since I am enrolled in those specialization at the moment. I wish with this opportunity and chances there will be more cooperation between Fontys Alumni and your company through working together and make great improvement on our surrounding. I put great hope to Mr/Mrs for considering my application to join this program. I look forward to hearing from you soon, Thank You.

Sincerely yours

Hafizh A. Zuhdi
